# Legal Data Technology GmbH Launches DEPLAW – the Enterprise Platform for Fully Automated Legal Case Management.

DEPLAW automates legal processes end-to-end – in a single system, with no isolated solutions. AI agents are embedded as orchestrated steps within BPMN workflows: controlled, auditable, and always human-directed.

**Wuppertal, Germany** – Legal Data Technology GmbH today publicly launches DEPLAW: the comprehensive Legal Tech platform that automates the entire legal case handling process for companies and law firms – from document intake to case closure.

DEPLAW has been successfully used in production by leading clients in the insurance and legal services industry for years – for demanding, high-volume projects where standard solutions fall short.

<p><b>7 Years</b></p> <p><b>In-house Development</b> built entirely in-house, no compromises</p>	<p><b>100,000+</b></p> <p><b>Cases / Year</b> fully automated in production</p>	<p><b>1 System</b></p> <p><b>All Processes</b> end-to-end, no gaps</p>
--	---	--

## One System. All Processes. Fully Automated.

DEPLAW maps the entire lifecycle of legal case management – from case intake through AI-powered analysis and classification, automated communication, to final case closure. No switching between systems. No manual handovers.

At its core is the BPMN-based workflow editor: legal processes are modelled visually, without any coding knowledge – and then run fully automatically. AI agents can be embedded as defined

process steps: they receive clearly defined inputs, perform a specific task, and pass their result on in a structured way within a professionally validated process.

*„Only when every step can be automated end-to-end in one place does friction become automation – and individual cases become a product. That is exactly what we built with DEPLAW.“*

– Tim Platner, CEO of Legal Data Technology GmbH

## Core Features

- **Workflow Editor:** BPMN-basiert, visuell, ohne Programmierkenntnisse – der fertige Prozess ist der fertige Code.
- **KI-Agenten:** Orchestriert im Workflow eingebunden – Document Analysis, Classification, Text Generation, Quality Review.
- **beA Interface:** Vollintegriert – eingehende Nachrichten werden automatisiert KI-basiert bearbeitet.
- **Batch Processing:** Mass proceedings are handled in parallel and fully automatically – scalable from hundreds to hundreds of thousands of cases per year.
- **Digitale Onlineakte:** Alle Beteiligten, Dokumente und Ereignisse eines Falls in einem zentralen System.
- **Intelligente Telefonie:** Anrufer werden mit Aktenrolle erkannt – in Echtzeit, vor dem ersten Wort.

## Who It Is For – and Availability

DEPLAW was built for demanding, high-volume projects and is designed for legal protection insurers, law firms specialising in mass proceedings, and in-house legal departments in corporations.

The platform is now available to new clients.

# Company Profile

---

## Full Profile

Legal Data Technology GmbH was founded in 2019 in Wuppertal with a clear mission: not merely to digitise legal processes, but to systematically automate them. The company develops all core products entirely in-house – without dependency on critical third-party providers – and operates them on its own Germany-hosted infrastructure.

In September 2021, the company was awarded the RHEINLAND GENIAL Prize for application-oriented Legal Tech solutions.

With DEPLAW, the company offers an enterprise platform that maps the entire lifecycle of legal case management in a single system: from document intake through AI-powered analysis, routing, communication and case management to final closure. AI agents are embedded as orchestrated steps within BPMN workflows – controlled, transparent, and auditable.

DEPLAW has been in active use by clients from the insurance and legal services industries for years, and has since automated well over 350,000 legal cases.

## Kurzprofil (Boilerplate – zur direkten Verwendung)

*Legal Data Technology GmbH (Wuppertal, founded 2019) develops Legal Tech solutions for insurance companies, large law firms and legal service providers. With DEPLAW, the company offers an enterprise platform for the complete automation of legal case management – end-to-end, in a single system, with orchestrated AI agents. The portfolio is complemented by VINQO, a legal service provider specialising in insurance clients. PRODUCT OVERVIEW

# What DEPLAW Delivers.

---

## Workflow Editor

Using the BPMN standard, legal processes can be modelled visually – without any coding knowledge. The finished diagram is simultaneously the finished automation. AI agents can be embedded as standalone steps within this workflow.

## AI Agents in the Workflow

In DEPLAW, AI agents are not autonomous systems but defined process steps: clearly bounded inputs, specific tasks, structured outputs. Typical use cases: document analysis, automatic classification, text generation, fact extraction, quality checks.

## beA Interface

The German electronic attorney mailbox (beA) is fully integrated. Incoming messages are automatically processed using AI – parties identified, deadlines extracted, processes triggered – before any staff member opens the document.

## Batch Processing

Mass proceedings with similar cases are handled in parallel and automatically. Scalable from hundreds to several hundred thousand cases per year – without additional headcount.

## Digital Case File & Telephony

All parties, documents and events of a case in one central connected file. Incoming calls are automatically matched to the correct case – the full case context is visible before the conversation begins.

WHO IS DEPLAW BUILT FOR?

## Drei Target Groups. Eine Gemeinsamkeit.

---

DEPLAW delivers its full value where high legal volumes meet high quality demands — and where manual processes can no longer keep up. The highly customisable Legal Tech platform is built for demanding legal projects and high-volume case management.

### Legal Protection Insurers

Insurance companies handle large volumes of claims and legal cases every day. DEPLAW automates this entire process — from initial review through AI-powered analysis to communication with lawyers and courts. The result: shorter processing times, lower cost per case and meaningful relief for internal specialists.

### Law Firms Specialising in Mass Proceedings

Law firms in consumer law, debt collection and litigation scale with DEPLAW. Recurring processes — from dunning order generation to automated proceedings — are modelled once and executed as often as needed. AI agents handle the substantive groundwork.

### Legal Operations in Corporations

In-house legal departments are under pressure: more cases, same resources. DEPLAW automates even complex, cross-departmental processes — deadline management, dunning proceedings, contract communication, regulatory correspondence — and returns capacity to legal professionals for complex and strategic work.

## TECHNOLOGY BACKGROUND

# KI – orchestriert, nicht autonom.

KI-Agenten werden in DEPLAW als definierte Schritte in einen orchestrierten Workflow eingebunden – nicht als autonome Systeme. Der Mensch modelliert den Prozess und bestimmt, wann welcher Agent mit welchen Eingaben aufgerufen wird und was mit seinem Ergebnis passiert. Alle Schritte sind protokolliert und auditierbar.

## Specific Use Cases

<b>Document Analysis</b>	e.g. automatically extracting parties, deadlines and amounts in dispute from incoming briefs
<b>Classification</b>	automatically determining document type and process routing
<b>Text Generation</b>	drafting response letters, summaries or statements of claim based on case information
<b>Fact Extraction</b>	structuring complex documents for case handlers
<b>Quality Review</b>	checking outgoing documents for completeness and accuracy

## Technical Foundation

<b>Workflow Standard</b>	BPMN – industrieller Open Standard
<b>AI Approach</b>	LLM-based, NLP, structured extraction
<b>Data Storage</b>	Exclusively in Germany; external LLM providers (e.g. Anthropic, OpenAI) can be flexibly integrated via open AI connectors
<b>Compliance</b>	GDPR-compliant, fully auditable
<b>Infrastructure</b>	High availability, multi-tenant, 100% in-house operated

*„Der KI-Agent ist ein Werkzeug im Orchester – kein Dirigent. Die Prozesslogik liegt beim Menschen.“*

– Tim Platner, CEO of Legal Data Technology GmbH
