EXECUTIVE SUMMARY

# What DEPLAW means for your organization.

DEPLAW fully automates legal case processing — from the moment a document arrives to the conclusion of the proceedings. One single system. No switching between tools. No manual handovers.

<p><b>7 Years</b> <b>Product Maturity</b> proven, not being tested</p>	<p><b>100,000+</b> <b>Cases / Year</b> fully automated in production</p>	<p><b>1 System</b> <b>All Processes</b> no more tool sprawl</p>
--	--	---

### Three key takeaways.

1. DEPLAW connects all process steps of legal case handling in one system — making full automation possible in the first place. Digitizing individual steps only creates new friction points.
2. AI agents are integrated as defined, controlled steps within human-modeled workflows. No autonomous and therefore unpredictable behavior.
3. The platform has been in production for seven years — at insurance companies, law firms, and enterprises processing hundreds of thousands of cases. DEPLAW is not a roadmap, but proven reality.

BEFORE / AFTER

## The operational difference.

No promises — a direct comparison of the status quo with operations on DEPLAW.

Area	Today	With DEPLAW
<b>Document Intake</b>	Manually sorted, forwarded	AI reads, classifies, routes — automatically
<b>Scaling</b>	More cases = more staff	More cases = same structure
<b>Process Consistency</b>	Dependent on individuals	Standardized, reproducible at any time
<b>AI Deployment</b>	Non-existent or isolated	Orchestrated within workflows, auditable
<b>System Landscape</b>	Multiple disconnected tools	One system, end-to-end
<b>Response Time</b>	Hours to days	Minutes to hours
<b>Transparency</b>	Difficult to measure	Every step logged & visible

### What DEPLAW does not change.

DEPLAW does not replace strategic decisions.

It automates all processes before and after the decision.

**DEPLAW is infrastructure — not competition for your team.**

AN HONEST SELF-ASSESSMENT

# Is DEPLAW right for you?

DEPLAW is not a product for everyone. The following checklist helps with an honest assessment.

## DEPLAW is a fit — if you...

- ✓ **handle a large case volume**  
Hundreds to hundreds of thousands of similar cases annually — with comparable process patterns.
- ✓ **aim for growth without proportional headcount increase**  
The link between case volume and headcount needs to be decoupled.
- ✓ **seek an end-to-end solution instead of more point solutions**  
The existing system landscape consists of disconnected tools with manual handovers.
- ✓ **are ready to rethink processes**  
DEPLAW does not layer on top of existing workflows — it replaces them with better ones.
- ✓ **want to deploy AI in a controlled and transparent way**  
No black box. Every AI step is part of a human-defined workflow.

## DEPLAW is not (yet) a fit — if you...

- ✗ **exclusively handle individual one-off cases**  
with low volume and a high degree of customization.
- ✗ **cannot or do not want to commit internal project resources**  
for the implementation.
- ✗ **are looking for an out-of-the-box solution without process work**  
DEPLAW requires engaging with your own processes.

„Who is DEPLAW not suitable for? We answer this openly on our website — because honest assessment is the foundation of good partnerships.“

— Tim Platner, CEO of Legal Data Technology GmbH

FOR CIOS, CTOS, AND CDOS

# AI — done right.

Two questions accompany every AI deployment in business-critical processes: What does it concretely deliver? And how does it remain controllable? DEPLAW answers both.

## The Principle

In DEPLAW, AI agents are defined process steps within a workflow. Each agent receives clearly defined inputs, performs a task, and passes on the result in a structured manner. No agent makes final decisions. No agent operates outside the modeled process.

## What AI agents concretely handle

<b>Document Analysis</b>	e.g. automatically extracting parties, deadlines, and amounts in dispute from incoming briefs
<b>Classification</b>	e.g. automatically determining document type and process routing
<b>Text Generation</b>	e.g. creating response letters or summaries based on case file information
<b>Quality Assurance</b>	e.g. checking outgoing documents for completeness and accuracy before dispatch

## Three Governance Guarantees

- ✓ **No autonomous action**  
All agents are part of a human-defined workflow.
- ✓ **Full auditability**  
Every AI step is logged and retrievable for compliance reviews.
- ✓ **Human override at any time**  
At any point, intervention, review, or correction is possible.

*„The AI agent is an instrument in the orchestra — not the conductor. Process logic remains with humans.“*

— Sebastian Adams, CTO of Legal Data Technology GmbH

FOR CISOS, RISK, AND COMPLIANCE OFFICERS

## Foundation, not promises.

Legal processes are business-critical. The software that supports them must deliver more than features — it must be stable, secure, and reliable in the long term.

### Maturity — not pilots, but production operations

<b>In operation since</b>	2019 — multiple years of production operation with enterprise clients
<b>Cases / Year</b>	Over 200,000 fully automated
<b>Development Period</b>	7 years of consistent in-house development
<b>AI Experience</b>	Over 46 billion AI tokens processed (2025)

### Technology & Security

<b>Development</b>	100% in-house — no dependency on critical third-party vendors
<b>Workflow Standard</b>	BPMN — open industry standard, no vendor lock-in
<b>Infrastructure</b>	German cloud, highly available, multi-tenant
<b>Data Storage</b>	Exclusively in Germany
<b>Compliance</b>	GDPR-compliant, fully auditable
<b>AI Governance</b>	Orchestrated, logged, human-overridable

### What this means for your risk assessment

- ✓ **No pilot project — proven infrastructure**  
Our software is battle-tested in countless mass proceedings
- ✓ **No vendor lock-in**  
BPMN is an open standard. Your process know-how stays in your hands.
- ✓ **No data transfer abroad**  
All data and AI processing remain in Germany.

## TAKE ACTION

# What happens next?

A decision for DEPLAW starts with a conversation. We listen first — and then concretely demonstrate what the platform can deliver for your specific processes.

## The onboarding process

<b>30 Minutes</b>	Initial contact & fit assessment — open, without sales pressure
<b>90 Minutes</b>	Individual demo tailored to your industry and processes (also possible directly at initial contact)
<b>Follow-up</b>	Technical deep-dive — architecture, integration, data privacy
<b>Optional</b>	Joint profitability assessment — realistic, not embellished
<b>Start</b>	Pilot project or direct start depending on your preference

## Three questions we answer in the initial meeting

- **What is the automation potential** for your specific processes and case volume?
- **How long does implementation take** and what are realistic milestones?
- **Was kostet DEPLAW** and what is a realistic return on investment?
